ULHASNAGAR – 421 003

CERTIFICATE

This is to certify that Mr./Ms. Vaishnavi Manoj Salunkhe of F.Y. Information Technology (FYIT) Roll No. 2541038 has satisfactorily completed the Web Designing Mini Project entitled Portfolio with Dynamic FAQ using jQuery & JSON during the academic year 2025 – 2026, as a part of the practical requirement. The project work is found to be satisfactory and is approved for submission.

Portfolio with Dynamic FAQ using jQuery & JSON

1. INTRODUCTION

A portfolio website is a personal website used to present an individual's skills, projects, achievements, and contact information in a professional manner. It works as a digital resume that allows students and developers to showcase their work online. A portfolio website helps others understand the person's technical abilities, experience, and creativity. It is widely used by students, job seekers, and professionals to present their work to recruiters and organizations.

The main purpose of developing this portfolio website is to create a platform where personal information and projects can be displayed in an organized and attractive way. Instead of sharing files separately, all project details, GitHub links, and contact information are available in one place. This makes it easier for others to view the work and understand the developer's skills.

This portfolio website is developed using web technologies such as HTML, CSS, JavaScript, jQuery, and JSON. HTML is used to create the structure of the website, CSS is used to design and style the website, and JavaScript and jQuery are used to add interactive features such as dark mode, typing effect, smooth scrolling, and dynamic FAQ section. JSON is used to store and load frequently asked questions.

The website consists of several sections such as Home, About, Projects, GitHub, FAQ, and Contact. The Home section introduces the developer, the About section provides background information, the Projects section displays completed projects, and the GitHub section provides repository links. The FAQ section answers common questions, and the Contact section allows user to send messages.

This project helps in demonstrating front-end web development skills and understanding of website design, event handling, and user interaction. It also helps in learning how to create responsive and interactive websites. This portfolio website can be used for academic purposes, job applications, and professional presentation.

2. REQUIREMENT SPECIFICATION

2.1 Functional Requirements

Navigation bar to move between sections

Home section with name and introduction

About section with personal and academic details

Skills section displaying technical skills
Projects section showing project details
Contact form with basic validation
Smooth scrolling and animation effects
Dark/Light mode toggle (if implemented)

2.2 Non-Functional Requirements

Responsive design (mobile, tablet, desktop)
Fast loading website
User-friendly interface
Compatible with modern browsers
Clean and organized code structure

2.3 Software Requirements

HTML5
CSS3
JavaScript
jQuery
VS Code / Acode
Web Browser (Chrome, Edge, Firefox)

2.4 Hardware Requirements

Computer or Laptop
Minimum 4GB RAM
Internet connection (for GitHub hosting)

3. SYSTEM DESIGN

3.1 System Architecture

The system is based on a client-side architecture.
Components include:

- HTML for structure
- CSS for design
- JavaScript for functionality
- jQuery for interaction
- JSON for storing FAQ data

3.2 Website Structure

The website contains following sections:

1. Navbar
2. Home Section

3. About Section
4. Projects Section
5.
6. GitHub Section
7. FAQ Section

3.3 Data Flow

User opens website
↓
User navigates sections
↓
JavaScript loads FAQ from JSON
↓
User interacts with website

3.4 User Interface Design

The UI includes:

- Navigation bar at top
- Hero section with introduction
- Project cards
- FAQ expandable section
- Contact form

4. SYSTEM IMPLEMENTATION

4.1 Technologies Used

HTML

Used to create structure like headings, forms, and sections.

CSS

Used to style website, layout, colors, and responsiveness.

JavaScript

Used to implement:

- Dark mode
- Typing effect
- Scroll reveal
- Event handling

jQuery

Used for:

- Smooth scrolling
- FAQ toggle
- Dynamic content loading

JSON

Used to store FAQ data.

Index.html

});

// Scroll Reveal
window.addEventListener("scroll", function(){
    document.querySelectorAll(".reveal").forEach(function(el){
        let position = el.getBoundingClientRect().top;
        let screenHeight = window.innerHeight;
        if(position < screenHeight - 100){
            el.classList.add("active");
        }
    });
});
```

faq.json

```
[
    {
        "question": "What languages do you know?",
        "answer": "I know C, C++, HTML, CSS, and JavaScript."
    },
    {
        "question": "What projects have you built?",
        "answer": "I have built Library Management, Bank System,
Portfolio Website, and Tourist Guide System."
    },
    {
        "question": "Where can I see your projects?",
        "answer": "You can see my projects in the Projects section and
GitHub section."
    },
```

```
    {
        "question": "What is your career goal?",
        "answer": "My goal is to become a professional software
developer."
    }
]
```

jQuery.js

```
[
    {
        "question": "What programming languages do you specialize in?",
        "answer": "I specialize in OOPs languages like Java and C# for
object-oriented development, as well as C for low-level programming."
    },
    {
        "question": "How can I contact you?",
        "answer": "You can reach me via email at
vaishnavi@example.com or connect on LinkedIn."
    },
    {
        "question": "Do you have experience with open-source projects?",
        "answer": "Yes, I actively contribute to GitHub repositories and
enjoy collaborating on open-source initiatives."
    }
]
```

5. SYSTEM TESTING AND RESULTS

5.1 Testing Types

Functional Testing

Checked all features like navigation, dark mode, FAQ toggle.
Result: Working properly

UI Testing

Checked layout, design, responsiveness.
Result: Proper display on different screens

Browser Testing

Tested on Chrome and Edge.
Result: Website works correctly

5.3 Result

https://vaishnavi0232007.github.io/Project_Portfolio/

6. FUTURE SCOPE AND CONCLUSION

Future Scope
The portfolio website can be improved further by adding more advanced features and functionality. Some possible future enhancements are:

1. Backend Integration
- Connect the contact form to a backend using Node.js, PHP, or Firebase.
- Messages sent through the contact form can be stored in a database.
- Enable real email sending functionality.

2. User Authentication
- Add login and signup functionality.
- Allow the owner to update projects without editing code manually.
- Create an admin dashboard for managing content.

3. Database Integration
- Store projects, FAQs, and contact messages in a database such as MySQL or MongoDB.
- Load data dynamically instead of static JSON files.

4. More Interactive UI Features
- Add animations using advanced libraries like GSAP.
- Improve dark mode with smooth transitions.
- Add loading animations and hover effects.

5. Responsive Improvements
- Optimize the website for mobile, tablet, and desktop screens.
- Improve layout flexibility using modern CSS frameworks like Bootstrap or Tailwind.

6. Blog Section
- Add a blog section to share programming knowledge and tutorials.
- This helps in showcasing knowledge and improving visibility.

7. Resume Download Option

- Add a button to download resume in PDF format.
- Helps recruiters easily access personal details.

8. Deployment and Hosting

- Host the website on platforms like GitHub Pages, Netlify, or Vercel.
- Make the website publicly accessible.

9. Performance Optimization

- Optimize images and code to improve loading speed.
- Use caching and minification.

8.GLOSSARY

Below are important terms used in this project:

1. HTML (HyperText Markup Language)

HTML is used to create the structure of the website. It defines elements like headings, paragraphs, buttons, and forms.

2. CSS (Cascading Style Sheets)

CSS is used to design and style the website. It controls colors, layout, spacing, fonts, and responsiveness.

3. JavaScript

JavaScript is used to add interactivity to the website such as dark mode, typing effect, smooth scrolling, and animations.

4. jQuery
jQuery is a JavaScript library that simplifies DOM manipulation, animations, and event handling.
5. DOM (Document Object Model)
DOM represents the structure of the webpage. JavaScript uses DOM to access and modify webpage elements dynamically.
6. JSON (JavaScript Object Notation)
JSON is a data format used to store and transfer data. In this project, JSON is used to store FAQ data.
7. Responsive Design
Responsive design ensures that the website works properly on different screen sizes like mobile, tablet, and desktop.
8. Dark Mode
Dark mode is a feature that changes the website theme from light to dark to improve user experience.
9. Local Storage
Local storage is used to save data in the browser. In this project, it stores the selected theme.
10. Navigation Bar (Navbar)
Navbar is a menu that helps users navigate different sections of the website.
11. Hero Section
Hero section is the main section at the top of the website that introduces the person and highlights important information.
12. Project Card
Project card is used to display project information such as title, description, and links.
13. FAQ (Frequently Asked Questions)
FAQ section displays common questions and answers.
14. Contact Form
Contact form allows users to send messages to the website owner.
15. Smooth Scrolling
Smooth scrolling creates a smooth animation when navigating between sections.
16. Animation
Animation adds motion effects to improve visual appearance and user experience.
17. GitHub
GitHub is a platform used to store and manage source code.
